

Memory Gauge Programming and Data Retrieval

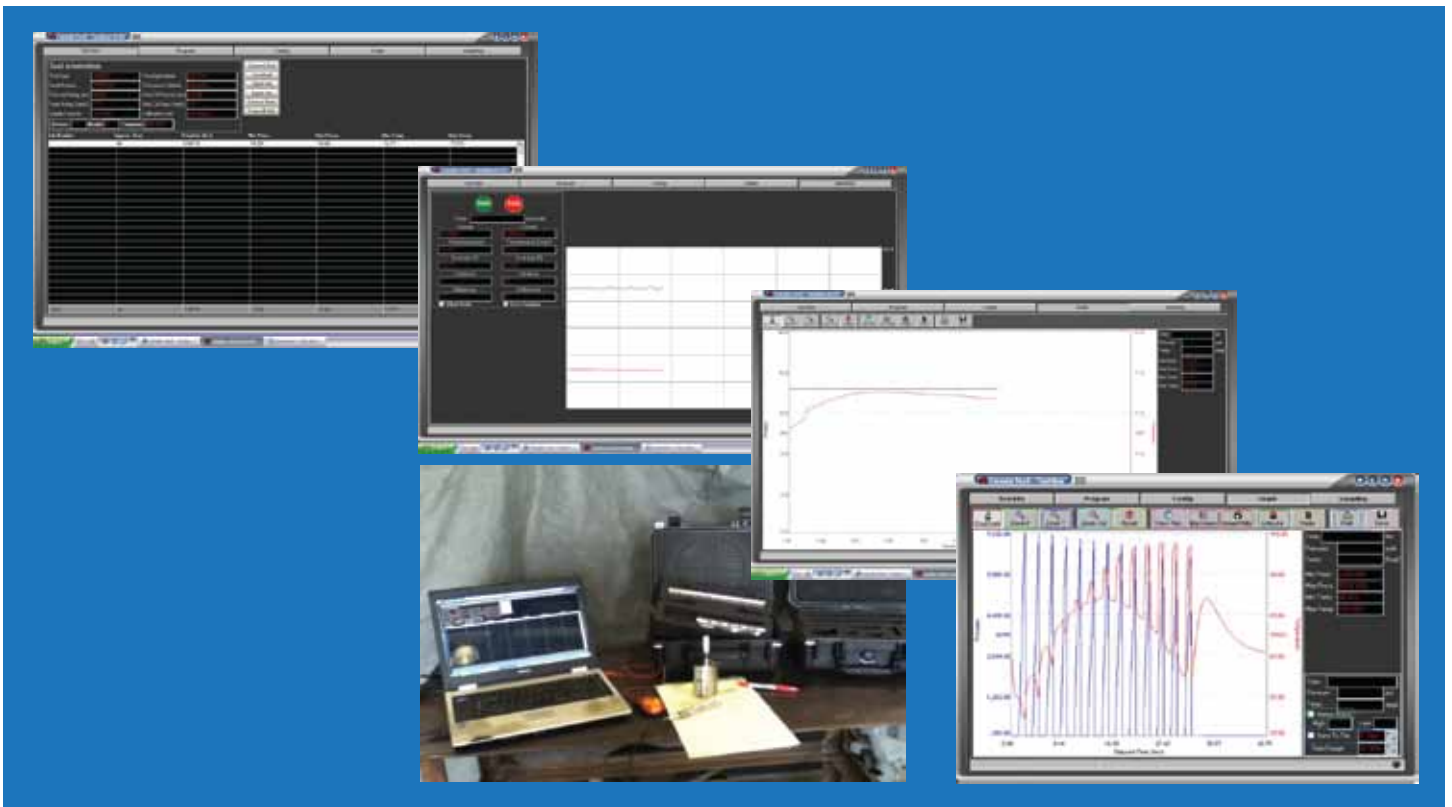

Description

The PTS multi-purpose software package is used to interface with pressure and temperature memory gauges. This software can be used with the memory gauges for programming, downloading data, erasing data, formatting, and bench testing.

The software is PC based and can be installed and used on any 32 or 64 bit operating system. Any readily available computer system can be used to connect via a USB interface cable directly to the memory gauges sensor. No additional hardware or software is needed.

Acquired data is processed on site with graphic and numeric data reports available in both electronic and hard copy reports. Electronic data can be easily transmitted off site using any type network system.

Operating Specification

- PC based software suite.
- Can be used with 32 or 64 bit operating system.
